

How to scan a QR code

On an iPhone:

- Open the Camera app from the Home screen, Control Center, or Lock screen.
- Select the rear facing camera. Hold your device so that the QR code appears in the viewfinder in the Camera app. Your device recognizes the QR code and shows a notification.
- Tap the notification to open the link associated with the QR code.

On an Android Phone:

- Open your camera app and point it steadily for 2-3 seconds towards the QR Code you want to scan.
- Whenever scanning is enabled, a notification will appear.
- If nothing happens, you may have to go to your Settings app and enable QR Code scanning. If QR Codes isn't an option in your settings, this means you'll have to download a third-party QR Code reader app.
